

Does the low-voltage crossarm need to be fixed to the cable tray

Overview

Answer: Yes; cables are tied down in cable trays to keep the cables in the cable tray, to maintain spacing between cables, or to segregate or confine certain types of cables to specific locations. The last two items can also be accomplished with a solid fixed barrier. The CTI needs to develop guidelines for this installation. This type of installation minimizes dust accumulation in dust locations and could be advantageous in other situations. Question: It. The crossarm refers to angle steel horizontally fixed on the top of electric poles, equipped with porcelain insulators to support overhead wires. The supervisor shall. When installing a cross arm electric pole, several guidelines should be followed to ensure the structure's integrity and safety: How Can Preformed Helical Tension Clamps Solve Your Installation Challenges?

Choose the Right Location: Select a site that is free from overhead hazards, such as branches. Low-voltage porcelain crossarms are finished products produced in factories and are fixed to the poles with iron brackets during installation. Low-voltage porcelain crossarms are suitable for straight poles and angle poles within 15°.
