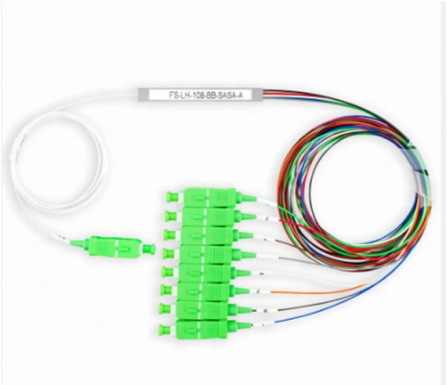
# How much does the optical module pull ring accessory cost



## Overview

Blue round SFP pull ring for optical modules. Easy-grip design for fast installation and removal, offering durability, precision fit and reliable performance.

## Key Takeaways

The cost of an optical module pull ring accessory typically ranges from $0. 50 to $5 per unit, depending on material, design, and supplier. Optical module pull rings are small hardware accessories used to facilitate the insertion and removal of optical transceivers in high-density network environments.

Prices vary based on material (e.g., silicone, zinc alloy, or sheet metal), weight (40g–100g options are common), and whether the product is customized or standard. Suppliers like SuWang and Shenzhen Aoli Die Casting offer bulk purchasing options, which can reduce the per-unit cost for larger orders. High-end or patented designs, such as those with springless mechanisms or integrated metal latches, may cost more due to improved durability and operational efficiency.

Shipping, order quantity, and customization (color, style, or form factor compatibility with SFP, QSFP, or OSFP modules) also influence the final price. For precise pricing, it is recommended to contact suppliers directly to negotiate based on order volume, delivery location, and any additional customization requirements. This approach ensures the most accurate and up-to-date cost for your specific needs.
