Intrusion Signal Distribution Box

Overview

Distributor boxes for intrusion detection systems, also known as alarm system distribution enclosures or security system junction boxes, are designed to centralize and protect wiring connections for sensors, detectors, and control panels. These units typically feature multiple cable entry points. They are used in explosion-protected areas for the transmission of intrinsically safe circuits up to and including Zone 1. The integrated PUSH IN connection enables particularly fast, secure and efficient cabling in the field. SMART DISTRIBUTION BOXES FOR FLEXIBLE BUILDINGS. It has 6 screw terminals with cable protection. Small and unobtrusive junction box. The. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices.
