

North Korean Optical Cable Fitting Manufacturer

Overview

Optical Cables < Product Introduction < Product LS Cable & System opens a happier, richer future through providing total solutions for optical communicatio.

Key Takeaways

Currently, there is no publicly available information confirming any North Korean optical cable equipment suppliers. The web results provided list several reputable South Korean and international manufacturers of fiber optic products and solutions, including X-BEAMTECH, LS Cable & System, Network Cable, Fiber Optic Korea, and ANFKOM, all of which operate globally but are based outside North Korea. These companies specialize in optical fibers, cables, connectors, and network components for telecommunications, data centers, and industrial applications, but there is no evidence linking them to North Korean networks or operations.

North Korea's telecommunications infrastructure is largely state-controlled, and the country is subject to international sanctions that restrict the import of advanced communication equipment. As a result, any optical cable equipment used in North Korea is likely sourced through indirect channels, smuggling, or domestic production under strict government oversight, rather than through openly listed suppliers. For research or monitoring purposes, analysts typically rely on government reports, UN sanctions documentation, and intelligence assessments to track North Korea's access to telecommunications technology, rather than commercial supplier listings.

This means that identifying a legitimate North Korean optical cable equipment supplier is extremely difficult, and no verified public sources currently exist.
