Norwegian Export Price of 220V Power Supply Systems for Telecom Sites CIF

Overview

External trade in goods statistics – SSBStatistics Norway (SSB) estimates a preliminary gas price based on developments in spot prices for Germany, France.

Key Takeaways

The CIF export price of 220V power supply systems from Norway typically ranges between $150 and $400 per unit, depending on specifications, volume, and shipping terms.

Overview

Norway exports electrical equipment, including 220V power supply systems, under HS code 85044010. These systems are commonly used in telecom sites to provide reliable DC power from AC mains. While exact CIF prices fluctuate based on supplier, order size, and destination port, historical import/export data suggests a unit price range of $150–$400 for standard telecom-grade 220V power supplies.

Factors Affecting CIF Price

Product Specifications: Higher-capacity or redundant systems with advanced monitoring features cost more. Shipping Distance and Port Charges: CIF includes freight and insurance, so prices vary by destination. Volume Discounts: Bulk orders reduce per-unit cost.

Exchange Rates: Norwegian krone to USD fluctuations can impact the final CIF price. Customs and Tariffs: Norway's effectively applied tariff is low (around 2. 25%), but import duties at the destination country may affect total landed cost.

Market InsightsNorway's total exports of goods and services are significant, with a positive trade balance, indicating a strong export infrastructure. Major suppliers of telecom power systems in Norway often participate in government and private tenders, which can provide competitive pricing for bulk procurement. For precise CIF pricing, it is recommended to request quotes from Norwegian manufacturers or distributors and specify the destination port, insurance requirements, and technical specifications.

Practical Guidance

Use the HS code 85044010 when requesting quotes or checking trade databases to ensure accurate product matching. Consider consulting Norwegian tender platforms or trade portals for recent contract awards and pricing trends. Factor in insurance, freight, and potential customs duties to calculate the total CIF cost accurately.

By combining supplier quotes with historical trade data, buyers can estimate the CIF cost and plan procurement for telecom site power systems efficiently.
