Price of disassembled optical module for sale

Overview

Optical Modules: Genuine/KIT/Removal/Used/Price and ScenariosUsed products are functionally tested, disassembled modules with traces of use but stable perf.

Key Takeaways

Disassembled or used optical modules typically cost 30%-40% of the price of brand-new modules, offering a cost-effective solution for testing or temporary deployment.

Pricing Overview

Disassembled optical modules, also referred to as used or functionally tested modules, are significantly cheaper than new modules, generally priced at 30%-40% of the original retail cost. This makes them suitable for scenarios where budget constraints or short-term deployment are priorities. In comparison, brand-new single-pack modules are the most expensive, while bulk-packaged originals are slightly cheaper, around 60%-70% of the new single-pack price.

Purchase Options

Online Marketplaces: Platforms like eBay offer a wide selection of used optical modules at competitive prices, often with fast shipping and buyer protection. Wholesale Distributors: Websites such as Alibaba provide high-quality used modules, including 10G SFP+ and FTTH transceivers, suitable for various applications. Specialized Suppliers: Companies like Poly Tech provide disassembled modules with functional testing and warranties ranging from 3 months to 1 year, ensuring reliability even for used products.

Considerations

Warranty: Even used modules often come with a limited warranty, typically 3 months to 1 year, which can provide peace of mind for temporary or experimental use. Compatibility: Ensure the module is compatible with your existing network equipment, as technical specifications such as speed, distance, and connector type vary. Condition: Disassembled modules may show signs of previous use but are generally functionally stable and suitable for testing or low-cost deployment.

In summary, if you are looking for affordable optical modules, disassembled or used options provide a cost-effective alternative to new modules, with prices typically 30%-40% of new units, and are available through online marketplaces, wholesale distributors, and specialized suppliers.
