Price of electrical distribution box repair services

Overview

Key cost drivers include panel amperage, indoor vs outdoor location, wiring length, and whether a full panel upgrade or rerouting is needed.

Key Takeaways

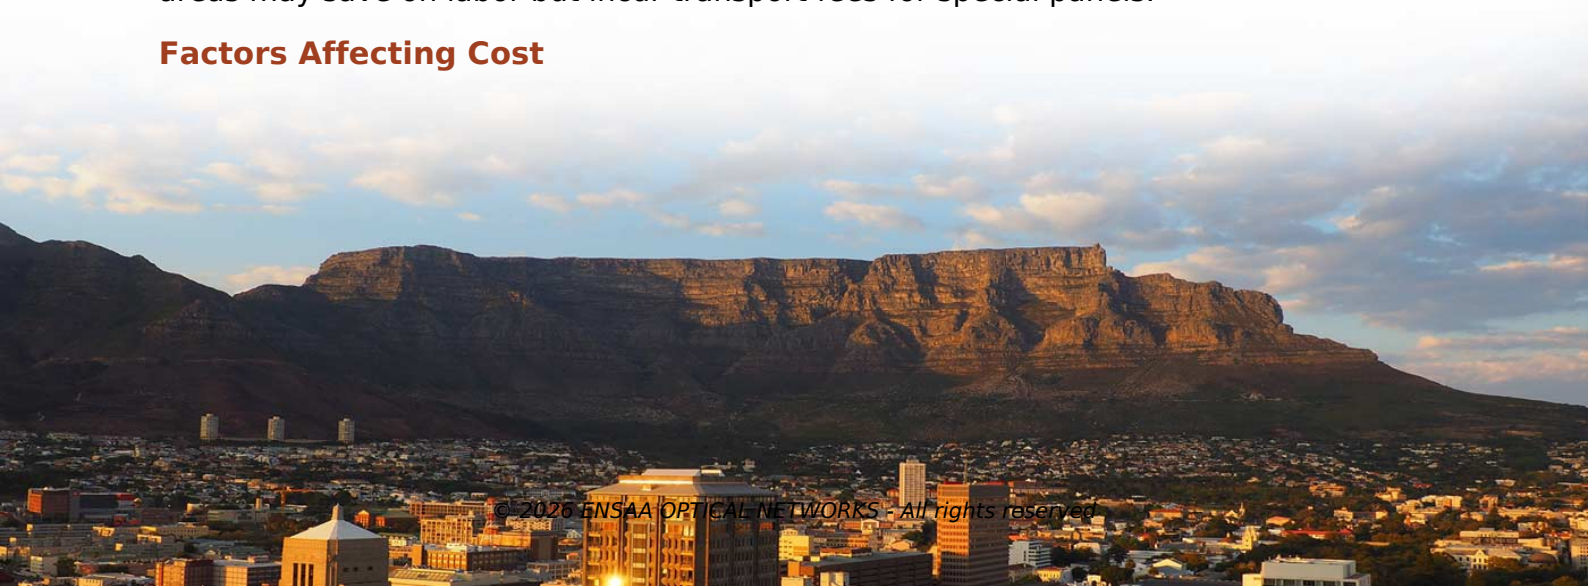

Electrical distribution box repair or replacement typically costs between $200 and $6,000, depending on the scope of work, panel type, and location.

Typical Cost Ranges

Minor repairs: Replacing a few breakers or fuses can cost as low as $200 to $500, depending on labor and parts required. Full panel replacement: For a standard 100–125A indoor panel, costs usually range from $1,200 to $2,500, including labor, materials, and permits. Upgrading to a 200A outdoor panel with a new meter socket can reach $3,000 to $6,000.

Regional variations: Urban areas and regions with higher labor rates, like the Northeast U. S., may see costs 5–15% higher than the national average, while rural areas may save on labor but incur transport fees for special panels.

Factors Affecting Cost

Panel amperage and type: Higher amperage panels or three-phase systems cost more due to additional breakers and wiring complexity. Labor rates: Electricians typically charge $50–$150 per hour, with total labor for panel replacement ranging from 6 to 30 hours depending on complexity. Permits and inspections: Local regulations may require permits, inspections, and licensed electricians, adding to the total cost.

Additional work: Moving the panel, rewiring, drywall repair, or installing smart meters can increase costs significantly. Accessibility and location: Indoor panels are generally cheaper than outdoor panels, and difficult-to-access panels may require extra labor.

Summary

For budgeting purposes, minor repairs start around $200, while full replacements or upgrades can reach $6,000, depending on panel size, labor, permits, and additional work. Always consult a licensed electrician for a precise estimate tailored to your home or facility, as costs vary by region and project complexity.
