Prices of Mesh Cable Trays and Fiber Optic Cable Trays

Overview

These wire mesh cable trays suspend cables and ensure that your important wires and cables are safely organized and out of your way.

Key Takeaways

Wire mesh cable trays typically range from $20 to $100 per 5-foot section, while fiber optic cable trays vary widely depending on configuration, generally starting around $50 and up.

Wire Mesh Cable Trays

Wire mesh cable trays, also known as basket trays, are designed to support small-diameter cables such as data communication lines. They are made from zinc-plated steel with corrosion-resistant finishes and allow airflow to prevent heat buildup. Standard sizes include widths of 4, 6, 8, and 12 inches, with a length of 5 feet and a depth of 2 inches.

Price Range: On platforms like Amazon, a 5-foot, 6-inch wide wire mesh tray costs approximately $25–$40 per section depending on finish and supplier. Grainger and McMaster-Carr offer similar trays, with prices ranging $20–$100 per section depending on size, material, and accessories. Applications: Ideal for data centers, network closets, hospitals, offices, and industrial facilities.

They can be mounted on walls, ceilings, or floors and are compatible with various fittings like curves, slopes, and tees. Accessories: Brackets, splice couplers, and ceiling hangers are available to support installation and structural integrity.

Fiber Optic Cable Trays

Fiber optic cable trays are specialized for high-performance fiber and copper cabling, providing protection and organized routing in data centers, enterprise networks, and central offices. These trays include channels, transitional fittings, drops, and support structures that allow flexible configurations. Price Range: Fiber optic trays are more variable in cost due to customization and system complexity.

Basic straight sections typically start around $50–$100, while complete systems with fittings and supports can exceed $200–$500 per section depending on size and material. Features: Tool-free assembly reduces installation time and maintenance costs. They are designed to accommodate network cabinets, distribution frames, and other terminal devices.

Applications: Used in data centers, mobile switching centers, and enterprise networks where cable protection and organized routing are critical.
