

Prices of Molded Cable Trays in Southern Europe

Overview

These trays are designed to hold and support various types of cables, including power cables, data cables, and communication cables.

Key Takeaways

Molded cable tray prices in Southern Europe are influenced by material type, load capacity, and regional market dynamics, with costs generally reflecting steel, aluminum, or stainless steel production and installation requirements.

Market Overview

The Southern Europe cable trays market, covering Italy, Spain, Portugal, Greece, and surrounding Mediterranean regions, is mature but strategically important due to ongoing industrial upgrades, renewable energy projects, and infrastructure modernization. Molded cable trays, typically made from steel, aluminum, or stainless steel, are priced based on material, corrosion resistance, load-bearing capacity, and compliance with EU standards like IEC 61537.

Price Influencing Factors

Material Costs: Steel and aluminum prices fluctuate with global commodity markets, directly affecting molded tray costs. Stainless steel trays are generally more expensive due to higher raw material and fabrication costs. **Tray Type and Design:** Solid-bottom, perforated, or ladder-style trays have different manufacturing complexities.

Molded solid or perforated trays often cost more than simple ladder trays due to material usage and production processes. Regulatory Compliance: Products meeting fire safety, corrosion resistance, and accessibility standards may carry a premium. Supply Chain and Local Manufacturing: Locally produced trays may be more cost-effective than imported options, but regional supply chain disruptions or tariffs can influence final prices.

Project Scale and Installation: Large industrial or infrastructure projects may benefit from bulk pricing, while small-scale installations may face higher per-unit costs.

Estimated Price Ranges

While exact prices vary by supplier and project specifications, molded cable trays in Southern Europe typically range from €20 to €80 per meter for standard steel or aluminum trays, with stainless steel or specialized corrosion-resistant trays reaching €100–€150 per meter depending on load capacity and customization. Additional costs may include brackets, supports, and installation services. Key Suppliers Ekabel24: Offers a range of steel, stainless steel, and halogen-free plastic trays compliant with DIN EN 61537.

R

S Components: Provides wire mesh, trough, basket, and single rail trays suitable for industrial and commercial applications. Trayco: Specializes in Belgian-manufactured cable trays, mesh trays, and ladders, with consulting and project-specific solutions.

Conclusion

Pricing for molded cable trays in Southern Europe is highly dependent on material, design, and regulatory compliance, with steel and aluminum trays being the most common and cost-effective. For precise quotes, contacting local suppliers like Ekabel24, RS Components, or Trayco is recommended, as they can provide tailored pricing based on project requirements and tray specifications.
