

Principle of AC power distribution box in base station equipment room

Overview

This acts as the “blood supply” of the base station, ensuring uninterrupted power. It includes: AC distribution box: Distributes mains power and offers surge protection. The EverExceed base station system is equipped with an AC and DC system, which consists of an AC distribution box/panel, a -48V high-frequency switch combined power supply (including AC distribution unit, high-frequency switch rectifier module, monitoring module, DC distribution unit) and one (or. A distribution box is an important electrical device mainly used for the distribution and control of electric energy in a power system. With dense equipment deployment and a continuously increasing number of wiring nodes, how can these lines be centrally distributed and clearly managed within a limited space?

In many communication.
