Key Takeaways

Leading manufacturers of cold aisle containment systems include AZE Systems, Legrand, Secure I. T. Environments, Subzero Engineering, and Modular Rack Systems (MRS), offering energy-efficient, customizable solutions for data centers.

Key Manufacturers and SolutionsAZE Systems provides modular hot and cold aisle containment solutions, including ceilings, walls, and end-of-row doors. Their systems are designed to maintain optimal operating temperatures, reduce energy costs, and can be customized to fit various rack sizes and layouts. Legrand offers the Contain-IT FLEX system, which creates enclosed cold aisles to ensure cool air reaches server inlets efficiently.

Their solutions are modular, scalable, and can be pre-fabricated for faster on-site assembly. Legrand also provides seismic-rated and engineered cabinet solutions for enhanced reliability. Secure I.

T. Environments delivers both partial and fully bespoke cold aisle containment systems. Their solutions are independent of cabinet manufacturers and can accommodate varying rack heights, widths, and depths.

They also offer thermal curtain options for budget-conscious projects. Subzero Engineering specializes in cold aisle containment systems that isolate cooled supply air directly to IT equipment intakes. Their modular designs include sliding doors, ceiling panels, and retractable roof systems, which improve energy efficiency, reduce hotspots, and lower operational costs.

Modular Rack Systems (MRS) focuses on high-quality, customizable cold aisle containment solutions made from aluminum and steel. Their systems include top panels, swing or sliding doors, and are designed to maximize cooling efficiency, reduce energy consumption, and extend equipment lifespan.

Benefits of Cold Aisle Containment

Energy Efficiency: By preventing hot and cold air mixing, these systems reduce cooling energy requirements and operational costs. **Equipment Reliability:** Maintaining consistent temperatures minimizes thermal stress and extends server lifespan. **Scalability and Flexibility:** Modular designs allow adaptation to different data center layouts and future expansion.

Customizability: Many manufacturers offer bespoke solutions to fit unique rack configurations and environmental requirements. These manufacturers provide a range of low-loss, high-efficiency cold aisle containment systems suitable for modern data centers aiming to optimize cooling performance, reduce energy consumption, and ensure long-term operational reliability.

Cold Aisle Containment

To reduce energy costs and noise in the data center, you must isolate the hot and cold airflow through each rack and the entire room. Austin Hughes's latest

Cold Aisle Containment | Legrand

By maintaining consistent, predictable temperatures, cold aisle containment minimizes thermal stress and reduces the risk of overheating, improving reliability and extending equipment lifespans.

Aisle containment | Airflow management | Eaton

Our rack containment products are engineered to maximize energy efficiency and reduce cooling costs by containing and guiding cool air within the racks where it's needed most.

Data Center Solutions | Maysteel Industries

You can find Maysteel's server racks, aisle containment solutions and structures in some of the most advanced, AI-driven data centers in the industry. For more than 30 years, our engineered solutions

Aisle Containment

Our aisle containment systems are vendor agnostic, featuring innovative, transparent panels that are lightweight and easily attached horizontally or vertically to cabinets using a universal rail system.

Containment Solutions

Custom configure and seamlessly integrate with our family of data center racks, cabinets, and modular containers. These fully manageable accessories have embedded management for real-time remote

Cold Aisle Containment in Data Centers | Subzero

Cold aisle containment systems use doors at aisle ends, ceiling panels or lids above racks, and structural frames to create enclosed zones where cold supply air

Differential air pressure in your data centre

If there is a negative pressure it means there is a build up of hot air at the rear of the racks, which will be trying to find its way back to the cold aisle. The same can occur if there are air
