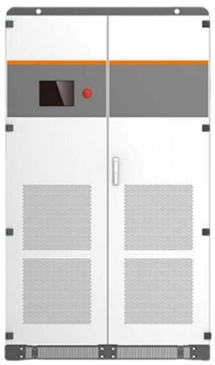
Router fiber optic light shows a red indicator light



Overview

7 Easy Methods to Fix the Red Light on Router A red LOS light on a fiber connection typically means “Loss of Signal,” which may be caused by a damaged fibe.

Key Takeaways

A red fiber optic light on your router usually indicates a Loss of Signal (LOS), meaning your router is not receiving a proper signal from your internet service provider.

What the Red Light Means

The red LOS light signals that your router or Optical Network Terminal (ONT) has lost connection to the ISP's fiber network. This is typically a physical connection issue rather than a software problem, meaning the router itself is likely functioning correctly but cannot detect the incoming fiber signal. Causes can include: Loose or improperly connected fiber optic or Ethernet cables Physical damage to the fiber line, such as cuts, bends, or dirty connectors Temporary service outages or maintenance by your ISP Faulty router or ONT hardware, though this is less common Troubleshooting StepsCheck Cable Connections: Ensure all fiber optic and Ethernet cables are securely connected to the router and ONT.

Inspect for visible damage or dirt on connectors. Restart the Router/ONT: Power cycle the devices by unplugging them for about 30 seconds and then plugging them back in. This often restores the signal.

Inspect for Service Outages: Contact your ISP or check their website/social media for any reported outages in your area. Clean Connectors: If the fiber connectors are dirty, carefully clean them with a fiber-safe cleaning tool.

Contact IS

P Support: If the red light persists after checking connections and restarting, your ISP may need to inspect the fiber line or replace faulty equipment.

Key Points

A blinking red LOS light often indicates a temporary signal interruption, while a solid red light may suggest a more persistent issue. The red light does not necessarily mean your router is broken; it usually reflects a problem with the fiber signal between your home and the ISP. Resolving the issue often restores internet connectivity without needing to replace the router.

By following these steps, most users can identify and fix the cause of a red fiber optic light, restoring their internet connection efficiently.
