Standard Specifications and Dimensions of Galvanized Cable Trays

Overview

The drawings which constitute a part of these specifications indicate the general route of the cable tray systems.

Key Takeaways

The sizes of galvanized cable trays can vary based on application and manufacturer, but here are some general considerations: Standard Widths: Common widths include 12", 18", 24", and 36". Standard Depths: Typical depths range from 2" to 6". Load Capacity: The size selection should consider the electrical load and cable volume.

Compliance: Ensure that the selected sizes comply with NEC or IEC standards. Fittings and Accessories: Various fittings are available to accommodate different installation needs. For specific sizes, it is best to consult manufacturer catalogs or specification documents for detailed options.
